

UNIQUE SAFETY EQUIPMENT

Table of contents:

1. UCMP - Unintended Car Movement Protection
2. Smart Maintenance System
3. GSM Anti Trapping Device
4. 2 in 1 Safety Door Edge
5. Earthquake Sensor Device
6. Flood Sensor Device
7. Fingerprint Identification
8. Green Health Air Conditioner
9. LCD for Elevator
10. Electro Luminescence

UCMP

Unintended Car Movement Protection

UCMP Action process

Breakdown occurrence
Usually to control circuit
or Machine brake

**Door opening and
movement occurrence**
Detective by UCMP

Car stopping
Dual-brake system action

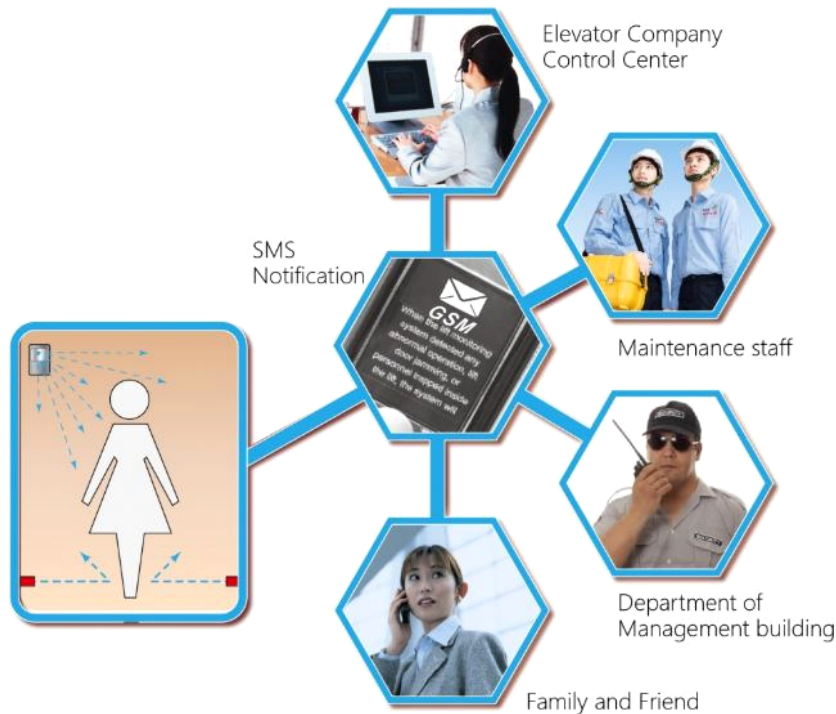

Passenger be saved
By specialist to perform

The UCMP - Unintended Car Movement Protection device can detect any abnormal movement of the elevator over 7.5cm, It will instantly operate a brake action.

SMART MAINTENANCE SYSTEM

ELEVATOR
INNOVATOR
SAKURA

This is a fully integrated monitoring system that will automatically notify the maintenance crews during emergency or in case of the elevator malfunction.

The technical team immediately correspond with the proper action to solve the problem.

Have 5 preset numbers to automatically receive the error message.

No matter what kind of situations happened, the passenger no needs to be anxious, since the SMS system will take care the passenger's safety.

GSM Anti- Trapping Device

- **AUTOMATIC RESPONSE SYSTEM**

Automatically notify the maintenance crews and lift operators during an emergency or in the case of malfunction.

- **LIFT MONITORING**

When the lift monitoring system detected any abnormal operation, lift door jamming, or personnel trapped inside the lift, the system will automatically notify the maintenance and operators.

- **FULL INTEGRATED SYSTEM
ALLOWS CUSTOMIZED**

Can be easily customized to accommodate multi-level individual operation requirements. the program allows the user to determine what data to be sent in the event of abnormal operation and the sequence.

Elevator GSM, anti trapping device

- **Automatic Response System**

This is a fully integrated monitoring and response system that will automatically notify the maintenance crews and lift operators during an emergency or in the case of malfunction.

- **Lift Monitoring**

When the lift monitoring system detected any abnormal operation, lift door jamming, or personnel trapped inside the lift, the system will automatically notify the maintained and operators.

- **Full integrated System Allows Customized**

The fully integrated system can be easily customized to accommodate multi-level individual operation requirements. The program allows the user to determine what data to be sent in the event of abnormal operation and the sequence.

2 IN 1 SAFETY DOOR EDGE

Infrared Multi Sensor plus Mechanical Safety door that provides dual safety protection of the passenger.

This special safety device is a CEDES product and Made in Swiss

Double Protection and Safety

Mechanical Safety Edge

Infra-Red Multi Sensor

 **CEDES** Made In Swiss **2 in 1 Safety Edge**

ELEVATOR
INNOVATOR
SAKURA

DM-23A01

Live saver, extra protection in secs

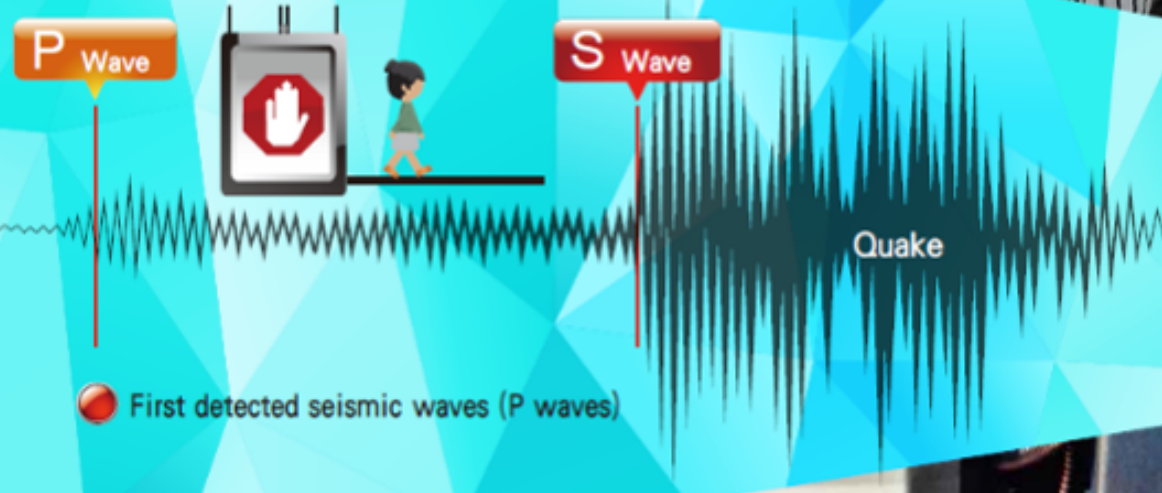

P+S
Seismic sensor

EARTHQUAKE SENSOR DEVICE

The Earthquake Sensor Device can detect P wave which is around 5 to 10 seconds before S wave comes. After receiving a warning signal, the lift will automatically goes to the nearest floor, door opens and passenger will be evacuated.

JAPAN IMPORTED

FLOOD! NO PROBLEM!

Won the multi-national patent, an exclusive new offering from Taiwan

FLOOD SENSOR DEVICE

The Flood Sensor Device detects flooding in the pit and send signal to control panel and the voice synthesizer will play sound "Elevator flooded do not use". The control panel will instruct the cabin to move to a safe floor, the elevator will go to second top floor, door will open to evacuate passengers.

Are you still using
the tradition card
identification?

Fingerprint Identification

*Non card identification, restrict floor, designated floor,
high perform, simple operate,*

*Easy to install, high storage capacity, up to 200persons
fingerprints, (400 records)*

Clear identification, fast speed (with 1:1 ratio, less than 5s)

FINGERPRINT IDENTIFICATION

- **ISO - STANDARD OF PROCEDURE**

Special module fit in with ISO 197594-2 international handprint identification standard. can use in different standium.

- **INDIVIDUAL OPERATION**

Individual high speed of mathematical operation, not necessary to connect computer.

- **HIGH PERFORMANCE**

By using high speed DSP of 500Mhz

- **LOW COST**

Competitive with high quality and low cost.

- **HIGH STORAGE VOLUME**

Store 200 persons with 2 fingerprints each. Comparing records up to 400 capacities.

- **SIMPLE OPERATE TABLE**

Simple operation table, included picture, create files, comparing individual profiles and records through RS232 signal by using FCP300 model high speed and flexibility.

ELEVATOR
INNOVATOR

SAKURA

Green Health Air Conditioner for Elevator

Compact

Water Proof

Quiet

Environmental Friendly
Energy Saving

Compact

Fully integrated machine design, machine body constructed with material has high anti-corrosion property, light weight, compact.

Water Proof

Condensates water is not heated by electrical heating elements, condensates water is processed by multiple atomizer ensuring its waterproofing characteristic, high performance heat insulated soft air hose, surface will not condensate.

Quiet

International renowned compressor with environment friendly antifreeze, utilize dual mufflers design, high operating efficiency distributes air evenly, use damping at vibration area.

Environmental Friendly and Energy Saving

High performance nano anti-microbial filter, dust filtration, multi level purification process, can effectively purify polluted air, anti-bacterial ionizer, purify air within the lift carriage, anti-fungal, automatic constant temperature, energy efficient meeting international energy efficient standard, remote controlled inside the carriage, easy operation.

LCD FOR ELEVATOR

EHLC Monochrome Elevator LCD Display

EHCL-A Photo Series LCD for Elevator

ESIM pure photo series LCD display for elevator

EHCL-B Multimedia Series LCD for Elevator

Ultra Power Saving New type of electro luminescence

- Ultra Low Power Consumption
- Slim Design, Heat Insulated
- Impact Resistant
- Shock and Moisture Resistant

ELECTRO LUMINESCENCE

- Even distribution of light, Non glare, Non harmful light source
- Short light wavelength, Spot Light, Especially bright at night
- Power saving, Ultra low power consumption (batteries are options)
- It's multi purpose for base surface and it can be cut into any shape as required
- Slim and soft, space saving, easily installed, cut production cost
- Customisable: to meet customer demands and specification

Power supply	DC1.5V~24V or AC 110V
Operating voltage	AC60V~AC220V
Operating Hertz	50 Hz~1.5 K Hz
Operating Temperature	-20℃~50℃
Storage temperature	-30℃~80℃
Brightness	30cd/m2~150cd/m2
Operating Current	0.1~0.2 mA/cm2
Power Consumption	10~20mW/cm2
Wavelength	450nm ~750nm
Life cycle	10,000~15,000 hours
